Internship Certificate

To Whom It May Concern,

This is to certify that **Mr. Kiko Ramon Lukas**, born on **9 January 1997** in **Arrecife**, completed a full-time internship with our organisations from **11 March 2026 to 11 May 2026**, working **40 hours per week** in the role of **Chief of Staff Intern**.

About Our Organisations

The **Pawsitive Care Foundation**, headquartered in Miami Beach, Florida, is a U.S.-registered 501(c)(3) public charity. **PawPro GmbH**, headquartered in Frankfurt am Main, leads operational product development and serves the European market. Together, the two organisations operate an AI-powered platform that combines at-home canine microbiome diagnostics with personalised health reports, animal-shelter sponsorship and adoption support, and educational content. Our mission is to measurably improve long-term canine health and the welfare of animal shelters worldwide.

Scope of Responsibilities

Mr. Lukas worked across an exceptionally broad, cross-functional remit and was closely involved in the strategic and operational leadership of the Foundation. His responsibilities included, in particular:

Strategy, Roadmapping and Business Development

- Developed two alternative growth roadmaps for the period 2026–2028 (ambitious and realistic scenarios) and consolidated them into a unified master roadmap
- Built the Foundation's business case, including headcount planning, twelve-month cost forecast, and a detailed comparative analysis of AI model costs (Anthropic Claude across Haiku, Sonnet and Opus tiers)
- Contributed to investor-facing materials and stakeholder briefings
- Structured the Foundation's operating expenses for the German tax advisory

- Authored the Foundation's vision document, user stories and platform status reports — consistently in both German and English

Software Engineering (Frontend and Full-Stack)

- Independently designed and built the Foundation's public web presence as a React/Vite single-page application with eleven public pages and an administrative donations dashboard; sole authorship in the corresponding code repository (over 120 commits)
- Contributed to the main platform (Next.js 14, TypeScript, Supabase, Stripe, Anthropic Claude API): authentication flow, pet context, allergy management, microbiome dashboard, and Stripe checkout integration
- Established an SEO pipeline with full-route pre-rendering, schema markup and Google Ad Grants compliance
- Implemented end-to-end internationalisation (German and English) across all user-facing components

Backend and API Integration

- Designed and integrated ten Supabase Edge Functions (AI chat, RAG search, Stripe webhook, embedding generation, dashboard aggregation, automated reminders, among others)
- Implemented the Stripe donation system end-to-end (donation tiers, checkout flow, impact tracking)
- Integrated the Anthropic Claude API for AI-generated health reports

DevOps and Cloud Infrastructure

- Set up four GitHub Actions pipelines for continuous integration and deployment (IONOS SFTP production deploy, Supabase migrations deploy, Edge Functions deploy, GitHub Pages demo deploy)
- Configured parallel hosting targets at IONOS (production) and GitHub Pages (demo), including static export
- Provisioned an internal Hostinger server with n8n for workflow automation and Nextcloud as a central collaboration platform — an initiative that meaningfully and durably improved the Foundation's internal operations

Team Coordination and Technical Leadership

- Briefed, onboarded and managed an external scraping team to source EU-wide animal-shelter and pet-industry data; reviewed and approved the deliverables
- Provided technical structuring and big-picture stewardship of the Foundation's RAG-pipeline development, working in close coordination with the Executive Director and an external data engineer; defined requirements and secured the necessary data access
- Collaborated with two additional engineers on the main platform's frontend

Brand and Visual Identity

- Designed the Foundation's brand system (Soft UI, colour palette, typography) and curated the logo selection
- Ensured consistent application of the visual identity across all products, reports and external communications

Security and Data Protection

- Configured row-level security (RLS) in the Supabase database for strict data isolation
- Implemented Stripe webhook signature validation and secure API-key management
- Designed and implemented the authentication middleware

Performance Assessment

Mr. Lukas has an exceptionally wide professional range, spanning strategic conception, technical implementation and operational execution. He took ownership of his remit independently, picked up new subject areas at a remarkable pace, and reliably grasped complex problem spaces. His work style is structured, anticipatory, and consistently outcome-oriented.

He **performed all assigned tasks to our complete and full satisfaction**. Even under time pressure and across multiple parallel workstreams, he maintained oversight and delivered work of consistently high quality. His initiative went well beyond what we would normally expect of an intern — many of the structures he introduced (team infrastructure, roadmap architecture, bilingual documentation pipeline) continue to benefit the Foundation today.

Conduct

Mr. Lukas's conduct toward the Executive Director, colleagues and external partners was **at all times exemplary**. He was consistently constructive, solution-oriented and respectful. In his direction of external teams he was confident, clear and communicated with poise.

Conclusion and Recommendation

The internship concluded as scheduled on 11 May 2026. We thank Mr. Lukas for his outstanding commitment and the excellent collaboration. We are delighted that our collaboration with him will continue beyond the internship in a freelance capacity — an arrangement we have actively pursued because his contribution remains of high value to both organisations. We recommend him without reservation and wish him every success in his future professional and personal endeavours.
