

Nachhall

Meetings that resonate.

Nachhall is a self-hosted meeting intelligence platform: browser meetings are recorded, transcribed and distilled by an AI pipeline into structured knowledge – summaries, tasks, decisions and ideas, automatically filed where you will find them again.

How it works

1 · Record

Meetings right in the browser – no installs, one-click join via a personal link.

2 · Transcribe

Automatic speech recognition with speaker attribution, right after the meeting ends.

3 · Understand

Local AI models distil tasks, decisions, ideas and a summary – each with a confidence score.

4 · Retrieve

Searchable archive, Kanban board, calendar, summary e-mails and PDF export.

Everything at a glance

The screenshot shows the Nachhall home interface. At the top is a navigation bar with 'Nachhall' and links to 'Start', 'Kalender', 'Board', 'Archiv', 'Projekte', and 'Personen'. On the right, there's a 'demo' button, a user profile for 'Mara Berg', and an 'Abmelden' button. The main heading is 'Was nimmst du heute auf.' followed by a subtitle 'HALLO MARA BERG. RAUM ANLEGEN, EINLADEN, REDEN – ARTEFAKTE LANDEN IM ARCHIV.' Below this is a 'GEPLANTE TERMINE' section showing a meeting 'Retro + Naechste Schritte' on Saturday, June 13th at 10:00, with a 21-minute countdown and buttons for 'Zur Countdown-Seite', 'Einladen', 'Verschieben', and 'Absagen'. Further down is the 'Alles im Blick.' section with four widgets: 'KALENDER' showing a weekly view with 'morgen 10:00' highlighted; 'ARCHIV' showing '1,5 Std' of content and a circular progress indicator with '11'; 'BOARD' showing '4' items with a progress bar and a list of tasks; and 'PROJEKTE' and 'PERSONEN' sections at the bottom showing counts of '2' and '3' respectively.

The home screen: live rooms, scheduled meetings with countdown and all key figures at a glance.

From conversation to outcome

Sprint-Planung Onboarding fertig

Mo · 08. Juni 2026 · 19:08–19:46 38 min

Projekt: Onboarding ▾

Meeting verwerfen

Zusammenfassung

Modell: demo-model

Sprint-Planung Onboarding

Der Onboarding-Prozess wird strukturiert. Checkliste und Kommunikationskanal werden aufgesetzt, neue Mitarbeitende starten kuenftig montags.

Tasks 2

- ☒ Stack-Channel anlegen
 - JF Jonas Feld ▾ Faelligkeit ▾ Niedrig ▾ Onboarding ▾ conf 0.95
 - Erledigt von Jonas Feld · vor 4 Tagen
 - Kanal #onboarding ist live.
- ☐ Onboarding-Checkliste schreiben
 - LS Lena Stein ▾ uebermorgen x Mittel ▾ Onboarding ▾ conf 0.88

Every meeting becomes a structured digest: summary, tasks with assignees, due dates and priority, decisions – each with the AI's confidence score.

One tool for the whole workday

OFFEN 1

- Bildmaterial optimieren
 - Alle Startseiten-Bilder komprimieren (WebP).
 - Jonas Feld In Arbeit

IN ARBEIT 2

- Footer-Links aktualisieren
 - Impressum und Datenschutz auf neue Seitenstruktur anpassen.
 - Mara Berg In Arbeit
- Hero-Section finalisieren
 - Finale Texte und Bild fuer die Startseite setzen.
 - Mara Berg 20 17.06. In Arbeit

ERLEDIGT 2

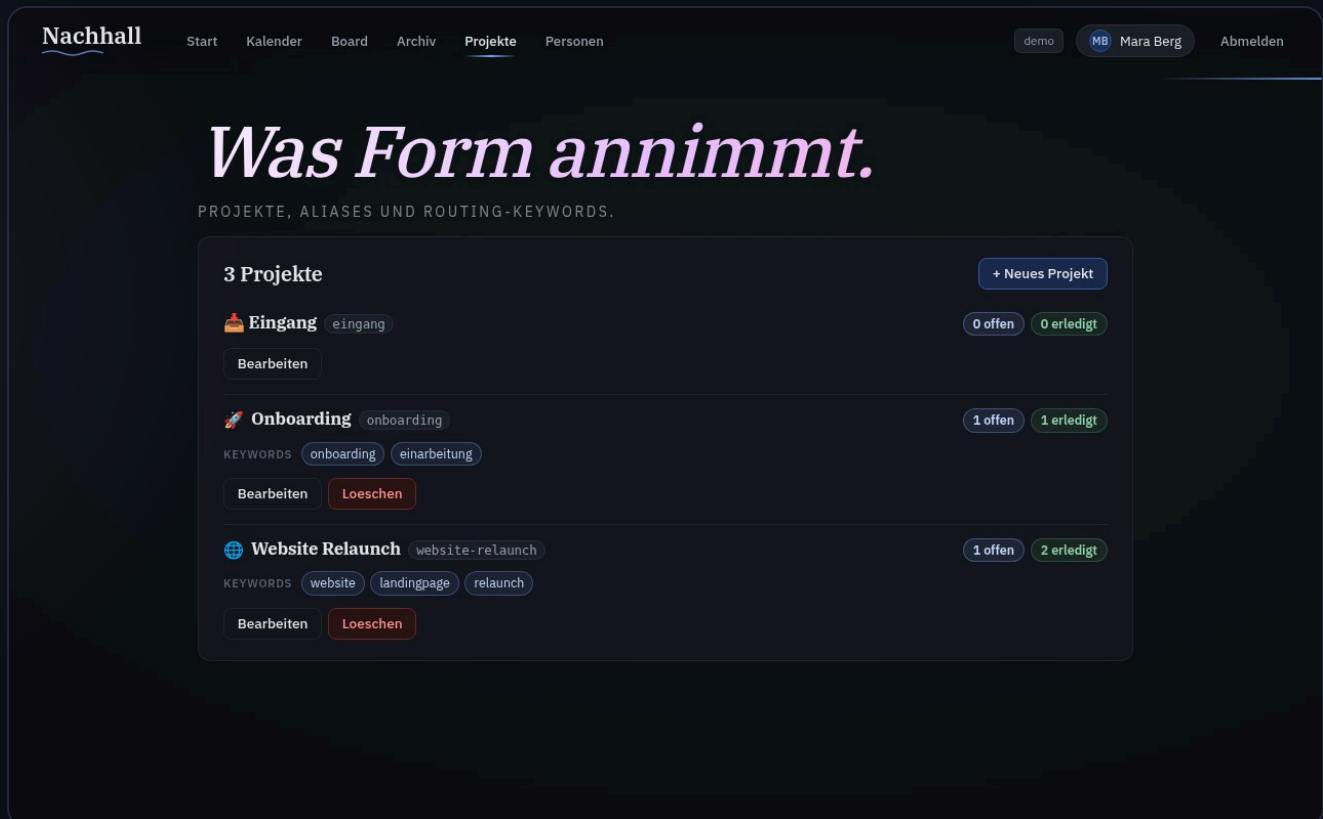

- Kontaktformular testen
 - Spam-Schutz und Bestätigungsgemal auf Staging prüfen.
 - Lena Roth In Arbeit
- Hero-Bilder finalisieren
 - Neue Produktfotos auswählen und fuer den Header zuschneiden.
 - Jonas Traub In Arbeit

Kanban board

Confirm, assign and complete AI-extracted tasks per project – every card links back to its source meeting.

Gets smarter with every meeting

Nachhall maintains an internal knowledge base: people, projects, tasks and decisions are linked across meetings. New items are not filed away in isolation – aliases and routing keywords route them to the right project automatically, anything ambiguous waits in triage. The system always knows the current state of every project and gets better with every conversation.

Projects with aliases & routing keywords: the memory that files every new meeting.

Features at a glance

- Browser meetings without installs, multi-screenshare
- Calendar with ICS invitations and one-click RSVP
- Notifications: invitation & summary e-mails
- Per-project Kanban board (tasks, ideas, decisions)
- Projects & people with their own colour and icon
- Searchable archive and PDF export of every digest

Data sovereignty instead of cloud vendors

Nachhall runs entirely on its own infrastructure. The AI processing – summaries, tasks, decisions – is done by local language models on servers in Germany. No US-cloud meeting platform, no vendor lock-in: the data stays in-house.
